CABLE INSTALLATION AND SUPPORT

MADE A WHOLE LOT EASIER

Q3:19 v1.91

A GLOBAL BUSINESS BUILT ON QUALITY, INNOVATION, SERVICE ...AND REAL FAMILY TIES

Business partners and brothers Nick and Matt Dykins' involvement in the business remains hands-on to this day. Matt, President of Slingco America, resides in the US, while Nick leads the UK operation as CEO of Slingco Limited.

Together they manage the companies' day-to-day business, new product development, and expanding global interests, most recently adding manufacturing facilities in India and opening sales offices in Moscow.

We've been living and breathing cable grips and wire rope for as long as we can remember. You can blame our Dad for that!

He founded Slingco more than 40 years ago. Since then, we've grown up and so has the company, evolving into an expert design and manufacturing operation, producing high quality cable grips, wire rope assemblies and more - products that are renowned for high performance in quality-critical applications.

Slingco is based in Atlanta, Georgia, but you'll find our products around the world, making heavy-duty cable installation and support a whole lot easier for people working in industries as varied as oil and gas, marine and offshore, public utilities, civil engineering, aerospace, transport, the military, performing arts, vehicle building, construction and more.

You can't make mistakes when you're dealing with products like ours. Too much depends on them. That's why we're obsessive about quality and innovation in design and manufacturing, and why nothing leaves our hands that isn't 100% dependable.

Because we understand exactly what your operation needs, we also know cost is a factor. We keep our prices realistic and hold a vast range of stock for fast – even same day – delivery.

We're brothers, partners and the driving force behind Slingco, but we're only a small part of the whole picture. We've got a fantastic team of skilled people who share our obsession with quality and great service. We're proud of every one of them.

Together, we're going to carry on developing outstanding products. We're going to carry on getting them out to you in record time. And we're going to carry on being the sort of company it's a pleasure to deal with.

HEAVY DUTY CABLE GRIPS

A TYPE - HIGH STRENGTH CABLE GRIP — HEAVY DUTY

The strongest grip we produce; can be used for metal wire and synthetic rope pulls. Perfect for overhead transmission and distribution line pulling or any applications with heavy load ratings, e.g. gas, electric railroad, rigging lines and construction pulls. When pulling synthetic rope use a Slingco Feed Tube (see below) to make rope insertion a breeze. To avoid the effects of torsion a line pulling swivel that rotates under load should be used. Galvanized Steel and color coded for ease of identification.

Slingco Part No	Color Code	Rope Diameter Range		Conductor Diameter Range		Overall length		Lattice Length		Approx. Break Load

FEED TUBE

Due to the tight construction of the A Type cable grip, we recommend using the Slingco Feed Tube when inserting cable or rope into the grips. For ease of use, our feed tubes are color-coded to match the A Type Cable grip.

Slingco part no.	Tube to fit rope diameter inches (mm)	Feed tube length inches (mm)	Matches Slingco Cable Grip part no.	Cable grip color

MU TYPE - HIGH STRENGTH CABLE GRIP — HEAVY-MEDIUM DUTY

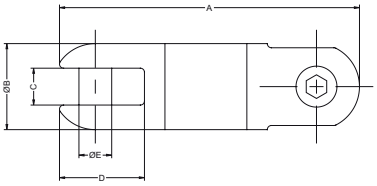

This grip's triple weave construction is ideal for heavy loads. MU cable grips are color coded for ease of identification. Perfect for stringing overhead transmission and distribution lines and heavy-load pulls of any kind. Use with bare or insulated cable, conductor or wire. The flexible eye connects with Slingco line pulling swivels for trouble free pulling applications. Made of Galvanized Steel.

LINE PULLING SWIVEL - BRIGHT ZINC PLATED STEEL

Swivels designed for use in stringing high tension wires for electrical transmission and distribution. Swivels are important in pulling when the lines develop torsion during installation. Swivels will release torque and prevent it from reaching dangerous levels, which can cause damage to the cable. All swivels are stringently quality tested and inspected to ensure optimum performance and reliability.

Slingco part no.	Safe working load lb (kg)		A in (mm)	Ø B in (mm)	C in (mm)	D in (mm)	Ø E in (mm)

SAFETY NOTE: All Slingco Line Pulling Swivels are designed for straight line pulling and will not support side loads as would be encountered traveling over a bull wheel. Swivel selection should be based on pulling line diameter, grip size, opening dimensions, pin sizes, working load, and sheave groove diameter. Swivels are not designed for general lifting

Please read breaking strength, safety and technical information on page 33

MEDIUM-LIGHT DUTY CABLE GRIPS

ST TYPE - SINGLE EYE DOUBLE WEAVE CABLE GRIP — MEDIUM DUTY

This Slingco grip features a double weave construction for medium to heavy pulling applications in underground installations.

ANTI ROTATIONAL DEVICE

The device prevents the cable from twisting as it travels over pulling blocks. Left uncontrolled, the optical cable's delicate glass fibers could be permanently damaged during installation.

- Stops cables from twisting as they pass over pulling blocks
- For use with fiber optic and OPGW cable
- Prevents irreparable damage to delicate fiber optics caused by cable twists during installation
- The ARD has weighted attachments that hang down while stringing, keeping the ARD vertical to stop cable rotation
- ARD attachments collapse in line, enabling them to travel easily over pulling blocks
- The ARD includes one 5,000 lb swivel attached to the head of the device

Specification	
Slingco Part No.	ZAD3799
Overall Length	29' Approx.
Working load (@3:1 Safety Factor)	5,000 lbs
Length of Attachments	8' Approx.
Weight of Attachment	14 lbs each Approx.

Please read breaking strength, safety and technical information on page 33

MEDIUM-LIGHT DUTY CABLE GRIPS

OS TYPE – OFFSET EYE CABLE GRIP

Similar to the SE Type single eye cable grip, but for when offset positioning is required. Excellent for pulling slack out of lines that have been pulled. May also be used for removing underground cables when end of cable is available.

L TYPE - LACE UP CABLE GRIP

Ideal for pulling light to medium loads; the L-type is fitted to the cable being pulled by stitching it together, like a football. Mainly used where a 'typical' cable grip can't be fitted over a connector at the end of a cable. For use in pulling when the end is not accessible. The L Type is wrapped around the cable, then closed with the wire lace provided. See Lace Up instructions on page 31.

R TYPE - ROTATING EYE MULTI-WEAVE CABLE GRIP — UNDERGROUND

Like the MU type, the rotating eye cable grip has a triple weave construction and is color coded for ease of identification. The steel forged revolving head is ideal for connecting to Slingco swivels. Warning: The Slingco rotating eye does not revolve under load and does not replace the use of a line swivel. Please see page 5 for swivel and grip match-up and safety and technical information. Made of Galvanized Steel.

RT TYPE - ROTATING EYE DOUBLE WEAVE CABLE GRIP — UNDERGROUND

Double weave construction for medium to heavy pulling applications in underground installations. Additionally its steel forged revolving head is ideal for connecting to Slingco swivels. Warning: The Slingco RT Type Rotating Eye Cable Grip does not revolve under load. The rotating eye does not replace the need for a swivel. Please see page 5 for swivel and grip match-up and safety and technical information.

OPEN ENDED CABLE GRIP

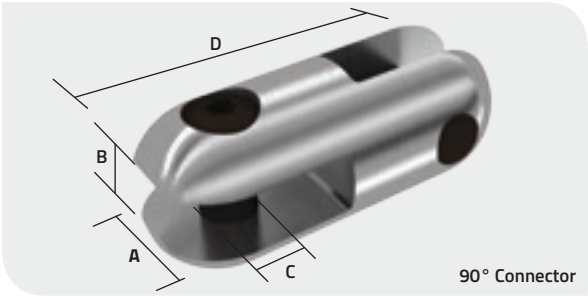

Ideal for joining two cables to form a continuous loop. Typical application: replacement of lift cables, where the old cable would be attached to the new one, and the cable then fed around with ease. Also used to temporarily splice cable and conductor where torsion forces are NOT an issue. Torsion should be released prior to splicing. Where torsion is present a swivel and two grips should be used.

CONNECTORS: 90°, ROPE TO ROPE, ROPE TO SWIVEL

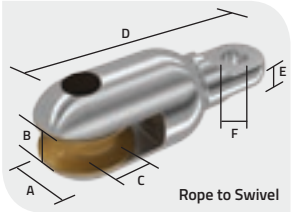

Use to connect rope, swivels and other objects. With high strength pins and smooth rollers you can safely connect rope without fear of fraying or damage. Use the convenient 90° connectors to link wire and other non-rope items. Connectors have high strength hex pins. The Rope to Rope connector has two rollers to protect rope from becoming frayed.

SPLICING GRIP - ROTATING SWIVEL LINK

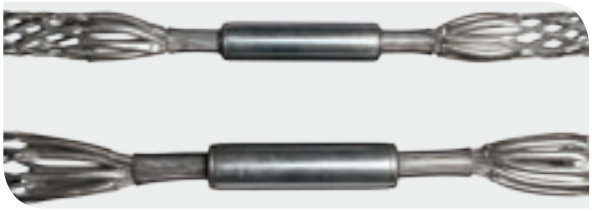

Slingco Rotating Swivel Link Grips are perfect for stringing replacement wire and cable on equipment and in drilling or rigging systems. Not recommended for use in overhead stringing applications. Use the existing cable as a pull wire to string the replacement cable. These grips are available with differently sized grips for each side. Call for assistance in selecting the proper grip. Link opens for easy installation and adjustment. Made of Galvanized Steel.

MEDIUM-LIGHT CABLE GRIPS / HEAVY DUTY HOSE RESTRAINT GRIPS

DE TYPE - DOUBLE EYE CABLE GRIP

Ideal for pulling light to medium loads; the main advantage over the single eye cable grip is the cable being pulled can be passed through the grip, several cable grips can be used to support over a calculated distance. Double Eye cable grips are excellent as hose restraints for lower psi-rated hoses. A thimble eye may be custom ordered with these grips.

MARINE CABLE GRIPS

These specialty cable grips are extremely heavy duty and suitable for large underwater pulls, plus other applications in the oil and gas industries. Galvanized steel construction for heavy duty large diameter pulls. Applications include underwater cable installation. Available in single eye, double eye lace closing and double eye. Sizes range from 4 inches to over 20 inches. Manufactured to order.

SLINGCO NON-METALLIC ARAMID CABLE GRIPS

FOR PULLING CABLE IN MANY INDUSTRIAL & COMMERCIAL PROJECTS

Slingco's Non-Metallic Aramid Cable Grip Features:

- Break loads similar to steel cable grips
- Lightweight
- No more frayed grip wires
- UV Resistant and strong enough to last in salt water, pollutants, and underground
- We can create custom grips to meet your specifications

Slingco's line of Non-Metallic Aramid Cable Grips are ideal for use in fiber optic cable installation operations, offshore applications, or for a multitude of uses in the utilities industry.

These grips are made of a high-strength, non-metallic aramid fiber, with UV protective coating, and now feature an improved weight to break ratio. They are suitable for pulling both single cable and multiple cable bundles.

Thanks to the non-metallic material, these grips are easy to work with even without gloves. The woven mesh material also offers a non-metallic, non-conductive alternative to steel grips.

We have many different styles of Non-Metallic Aramid Cable Grips for your project, such as Single Eye, Double Eye, Offset Eye, Lace Up, Mining Grips, and our new Single Eye Double Weave Grips made of ultra flex aramid material. We can also work with you to customize an Aramid Cable Grip to match any particular project specifications.

Call your Slingco Account Manager today and they will help you select the right grip for your project!

CABLE SUPPORT GRIPS

Heavy Duty support grips made from stainless steel are perfect for supporting heavier cable, conduit or any other cylindrical object. Often used by Utilities and Contractors to support cables transitioning from overhead to underground. One may support multiple cables in one grip. The overall diameter of the cable bundle should fit within the listed range.

CABLE SUPPORT GRIPS

CONDUIT RISER CABLE GRIP - STAINLESS STEEL

Conduit riser grips are designed to support cables within conduit. Designed to match standard conduit sizes. These grips come in single and double weave as indicated in the chart below. Also available in Split Ring design for supporting cable already installed or when the end of the cable is not available.

Call 888-685-9478 for additional sizes and styles.

CABLE SUPPORT GRIPS

DELUXE CORD GRIPS

Deluxe Cord Grips provide strain relief and bend support for cables running into machinery and connection boxes. Select the deluxe grip that fits the NPT size being connected to. Available with Straight Male, 90 degree Male, 45 degree Male and Straight Female connections. The wire mesh grip is sized to provide bend support and pull out resistance for the cable range listed.

DUST-TIGHT CORD GRIPS

Dust-Tight Cord Grips provide strain relief and bend support for cables running into machinery and connection boxes. Select the deluxe grip that fits the NPT size being connected to. Available with Straight Male, 90 degree Male, 45 degree Male and Straight Female connections. The wire mesh grip is sized to provide bend support and pull out resistance for the cable range listed.

TRI & QUAD PULLING SLING

This staggered pulling sling is designed to allow the pulling of multiple conductors at the same time while minimizing the overall diameter of your pulling bundle. These pulling slings come in a three leg or four leg versions. One should use a swivel for each leg and at the head of the sling to release torsion and allow the conductors to rotate freely. The suggested swivels are listed with each model.

Minimum break load – 5,000 lbs

Slingco has Cable Support Grips for every application:

- Alternative Energy Wind Farms & Turbines
- Aquatic
- Cell Towers
- Conduit Risers
- Data Centers
- Fish Farms
- Machine Shops
- Manufacturing
- Mining
- Oil & Gas Service Loop
- Utility Poles
- Waste Water

WIND TURBINE SUPPORT GRIP - HEAVY DUTY THIMBLE OFFSET EYE

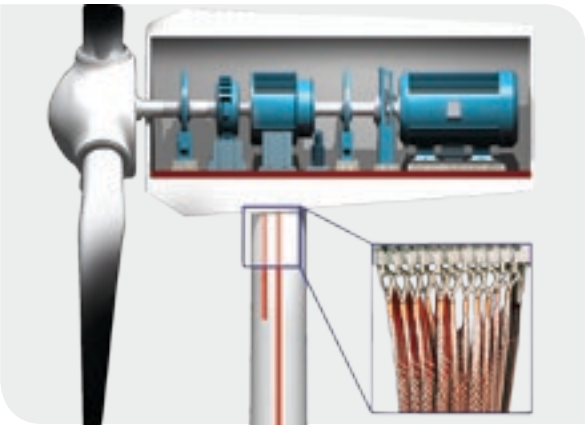

Slingco has developed a range of cable grips tailored for the renewable energy sector for use in:

- Cable installation – on-shore and off-shore
- Cable support inside wind turbines
- Cable management

For wind turbines, special features have been adapted to allow for minimal contact with the actual cable while still allowing excellent working loads and cable support.

The Slingco Wind Turbine Support Grip is manufactured from 316 Stainless Steel and provides cable support and control inside the wind turbine. It features rounded copper ferrules and offers reduced cable contact for high vibration environments. Custom grips can be adapted to meet any requirement.

TOOLS, BUCKLES AND BANDS

FOR QUICK AND EFFICIENT BANDING OF CABLE GRIPS, HOSES AND MORE

Slingco Banding Tools deliver a fast and easy way to install banding clamps. Designed for fast and efficient installation of steel bands for cable grips, hoses and many other applications, their drop-forged construction and comfortable design makes them quick and easy to use and guarantee a long and useful tool life.

We offer three different tool options, with bands and buckles available for each (order separately). See opposite for the bands and buckles suited to each tool type.

In addition to our range of steel bands available from stock we can also manufacture custom sizes if required. Please call with your requirements.

Slingco Fast Banding Tool

WITH PRE-LOOPED BANDS FOR QUICKLY SECURING GRIPS AND OTHER SIMPLE BANDING APPLICATIONS

Our Fast Banding Tool uses pre-looped punch-style bands for quick and secure banding of cable grips, hoses and other cylindrical items.

Slingco Light Duty Banding Tool

FOR UTILITY POLE AND OTHER LIGHT DUTY POLE BANDING APPLICATIONS

Featuring a built-in cutter with PVC coated handle for comfort, and a sliding block assembly with spring loaded lever. Operates on band widths 3/8" to 3/4" and thicknesses up to 0.030".

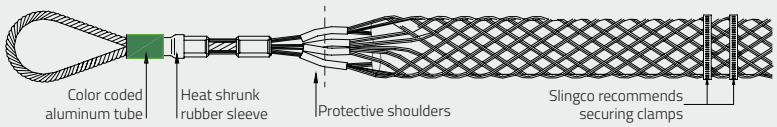

Slingco Heavy Duty Banding Tool

FOR UTILITY POLE AND OTHER HEAVY DUTY BANDING APPLICATIONS

Featuring a built-in cutter and a sliding block assembly. Operates on band widths 3/4", 1", and 1-1/4" and thickness of 0.044".

Note: Slingco recommends double banding the ends of cable grips.

FAST BANDING: PRE-LOOPED BANDS FOR QUICKLY

CPC2875

LIGHT DUTY BANDING: UTILITY POLE AND OTHER

CPC8748

HEAVY DUTY BANDING: UTILITY POLE AND OTHER

CPC8780

SECURING GRIPS AND OTHER SIMPLE BANDING APPLICATIONS

Use pre-looped punch style bands to quickly and securely band cable grips, hoses or other cylindrical items.

The bands are pre-looped through the buckle to slide over the end of the item being banded. Just tighten the band using the Slingco Punch Banding Tool then, when the band is tight, just punch the head of the tool and snip off the extra banding. Simple!

The sizes opposite refer to the inner loop diameter of the band. Select the size that will comfortably fit over the item being banded.

Open End Band – non pre-looped 201 SS 5/8" wide band with attached buckle. Includes punch style buckle. Use as single loop for larger diameter or double looped for smaller diameters and added strength. Maximum diameter for single or double loops is listed.

LIGHT DUTY POLE BANDING APPLICATIONS

Use Slingco 3/4" wide 201 Stainless Steel, or the 1/2" wide 316 Stainless Steel, banding system to secure cables and other items to Utility poles, Light stands or other structures. The Light Duty Banding Tool allows you to easily tighten and secure any length band loop.

Slingco offers rolls of 3/4" and 1/2" wide banding material in 100 foot lengths. These 100 foot band rolls come in two convenient packages – standard stack-and-store cardboard packaging, or an easy to carry red plastic tote for the 3/4" and a blue plastic tote for the 1/2".

The buckles used to secure these bands are made of 201 Stainless Steel and designed for 3/4" width bands, and 316 Stainless Steel designed for 1/2" bands.

Banding tool					
Description					Slingco part no.

HEAVY DUTY BANDING APPLICATIONS

Use the Slingco 1-1/4" 201 Stainless Steel Banding system to secure cables and other items to structures and poles where extra strength hold is required. The Heavy Duty Banding Tool allows you to easily tighten and secure any length band loop.

Perfect for use with concrete utility poles. The extra width of this band provides stronger tensile strength than the 3/4" band as well as a wider holding surface. Useful in many application environments including Utility, Marine and manufacturing where securely attaching cables, hoses or tubes onto a cylindrical object is needed. 100 ft. band roll comes in easy to stack and store cardboard box.

Giant buckles are made of 201 Stainless Steel and designed for use with 1-1/4" wide bands.

REEL LIFTER

The Slingco Reel Lifter is a high capacity, compact unit that allows users in the utility construction industry to safely load, transport, and dispense wire and/or cable on-site. It is also used in many industrial applications to make moving and relocating reels in a warehouse easy. Now a task that normally used a team of three or four people can be done with just one, allowing the crew to operate more efficiently!

Makes handling large cable reels quick and easy, on-site or in warehouses.

- Rugged construction to lift and upend reels
- Easy rotation to unroll cable
- Counterweighted bottom arm for easy insertion in reel
- Side lifting eye allows reels to be put into a rolling or non-rolling position

HAND LINE TOOLS

3" Hand Line Block

Slingco's Hand Line Tools feature a 3" nylon fiberglass block, with a safe working load limit of 1,000 lb, and a double locking snap with a safe working load limit of 5,000 lb.

Our 3" Hand Line Block's sheave can accommodate a 5/8" diameter rope, and operates smoothly on the 1/2" diameter axle and swivel bearings. The side opening feature allows quick access to remove the hand line.

60 TON HYDRAULIC CRIMPING TOOLS

Slingco's Hydraulic Crimping Tools are designed to crimp sleeves and lugs on ACSR and ACAR transmission & distribution cables using dies that meet the standards of the utility industry. Our crimping tools are ideal for use in constructing substations and transmission lines.

The Single-Acting Crimping Tool uses hydraulic pressure to advance the ram into position, and an internal spring to return the ram to the original position. The Double-Acting Crimping Tool advances and returns the ram using hydraulic pressure alone, eliminating the possibility of the ram sticking or becoming jammed.

Our Hydraulic Crimping Tools come in a steel carrying case, and are lightweight and portable. Our crimping tools accept Slingco S60 Dies, or any shell-type dies used with Alcoa or Burndy 60-ton crimping tools.

- Accepts Burndy L and Alcoa 6000 Series dies
- Steel Carrying Case Includes Ground Stand
- Lifting eye for hoist work
- For Crimping ACSR and ACAR transmission and distribution cables

MECHANICAL CRIMPING TOOLS

Slingco's Mechanical Crimping Tools have been created to complete the variety of utility distribution service connections that need to be made on the line, pole, and home. Our crimping tools have been designed to provide reliable crimps installing full-tension or non-tension connectors.

Slingco's Mechanical Crimping Tool's 'D3' groove allows 'W' style die inserts for installing taps, splices, and terminal connectors. The 'W' die inserts lock securely and easily into place with the positive lock, spring-loaded die buttons. Slingco also offers a Mechanical Crimping Tool that accepts Kearney type dies.

Our Mechanical Crimping Tools also have ergonomic handles for comfortable use and maximum leverage when making critical connections.

POLE LINE SUSPENSION CLAMPS

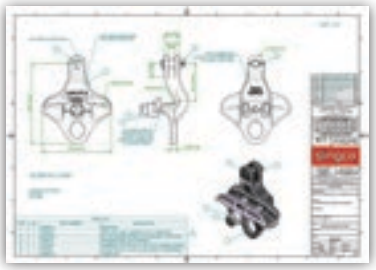

Slingco suspension conductor clamps provide safe and quick installation and removal of the conductor when attached to the insulator. A single fastener fully opens and closes the jaw. The clamps come in a variety of sizes to accommodate conductors from 0.16 to 1.50 inch diameter, and loadings of up to 18,000 lbs. To prevent loss, all moving parts of the clamps are captive.

Depending on size, the clamps are either made from heat treated aluminum alloy 356-T6 or ductile iron 60-45-15 and hot dip galvanized for corrosion resistance.

THE SOLUTION APPROACH

HOW WE ARE DIFFERENT

We work with Utilities and Contractors through distributors to provide a cost-saving approach to Pole Line Hardware.

Instead of simply offering a range that's similar to what's already in use, we offer an equivalent to standards-compliant products, manufactured to the exact specifications you need.

This makes transition to the Slingco brand easy, but also gives standards engineers the opportunity to work with us on new projects and designs.

Once the Pole Line hardware is approved, we keep the product in stock for immediate shipping whenever needed.

This is a new approach, already successfully introduced into other industries by Slingco, that we're now delighted to bring to the OHL and related markets.

CALL SLINGCO AT 888 685 9478 AND LET US PUT OUR SOLUTION APPROACH TO WORK FOR YOU

CABLE PULLING GRIPS AND CABLE SUPPORT GRIPS

ASSESSMENT OF SUITABILITY

There are many factors that must be taken into account when assessing the suitability of a cable grip for a proposed application and trying to calculate a safe working load. These include:

- Size of cable grip in relation to size/shape of gripped object(s)
- Stability of object(s) when gripped
- Grip surface of object(s)
- Resistive force of object(s)
- Anticipated path of movement, including possible obstructions
- Approximate breaking strength of the cable grip
- Condition of cable grip
- Suitability and compatibility of any attachments used
- Environment / operating conditions
- Persons at risk

If you have any questions regarding suitability for any particular application please call the distributor who supplied the cable grip or our in-house Technical Department.

Please note: Slingco cable grips must be double steel banded securely before being pulled.

LATTICE DIMENSIONS

Lattice dimensions shown are as fitted to a nominal diameter of cable and prior 'free length' may be slightly longer than stated.

APPROXIMATE BREAK LOAD

This is the calculated average based on actual testing done by Slingco. Approximate break loads are quoted as a guide only.

SAFE WORKING LOAD

Application load is normally calculated to be reduced by at least a factor of 5x the Approximate break load. Due to the wide variety of application parameters, the end user must apply a sensible safety factor to suit the safety requirements for the conditions of use.

The Safe Working Load (SWL) of a Slingco cable grip will depend on the Factor of Safety (FOS) applied to the Minimum Breaking Load.

FACTOR OF SAFETY (FOS)

Where the operational risk is considered to be normal, it is recommended that a FOS of 5 be applied, for a high risk operation a FOS of at least 10 should be considered. It is impossible to catalog or guarantee a safety factor that will apply for all applications.

Approximate Break Loads stated on any certification, the recommended Factors of Safety, and any implied or stated fitness for purpose, are all only applicable when the cable grip is as new and unused.

A 20% variance in break loads must be allowed for when selecting a cable grip; a suitable swivel must be used if there is 'twist' in the cable.

Pulling devices should only be attached via the pulling eye.

Torsional stress must be dealt with when using grips for line pulls and wire splices. When twisting forces are present use a swivel that rotates under load to release torsional stress.

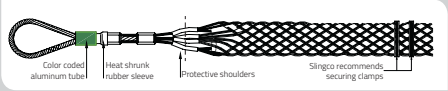

Cable Grip Safety Information

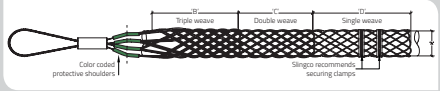

- Ensure that the cable grip mesh fits conductor correctly
- Ensure that the conductor fits up to the mid-point of the protective shoulder
- Clamp the ends of the cable grip when attaching the conductor. We recommend between 1¼" and 2¼" from the end of the cable grips SECURE CLAMPING MUST BE USED ON SLINGCO CABLE GRIPS
- Never modify or attempt to repair any grip
- Ensure proper maintenance of the cable grip. If in doubt call 888-685-9478
- Check the condition of the cable grip, and that it is the correct size for the intended application - do not exceed the rated capacity
- Grips that are worn, bent or otherwise damaged should not be used
- Grips are only to be used for temporary installations
- Pulling devices should only be attached via the pulling eye
- Cable grips must only be fitted and used by trained competent person(s)

SLINGCO CABLE GRIPS MUST NOT BE USED TO THEIR APPROXIMATE BREAKING STRENGTH.
A SENSIBLE SAFETY FACTOR MUST ALWAYS BE USED.
IF IN DOUBT CONTACT THE MANUFACTURER OR THE DISTRIBUTOR THAT SUPPLIED THE GRIP!

If you have any questions regarding suitability for any particular application please call 888-685-9478

TYPICAL CONFIGURATIONS

SINGLE AND DOUBLE EYE CABLE GRIP INSTRUCTIONS

PLEASE NOTE: The condition of the cable grip should always be checked prior to use. The correct size of grip should always be used for the intended application. The rated capacity of the grip should never be exceeded. Grips that are worn, bent or otherwise damaged should not be used.

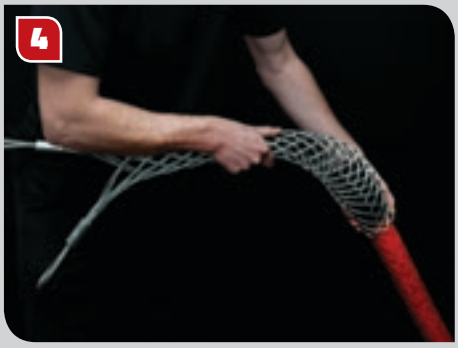

Select the correct grip for the diameter of the conductor.

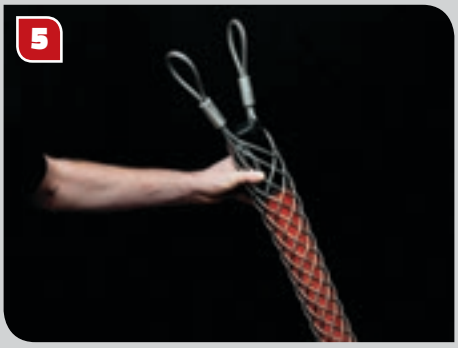

Prior to use, the lattice at the end of the grip needs to be widened. This can be easily achieved by pressing the end of the grip against a hard surface, which causes the lattice to expand.

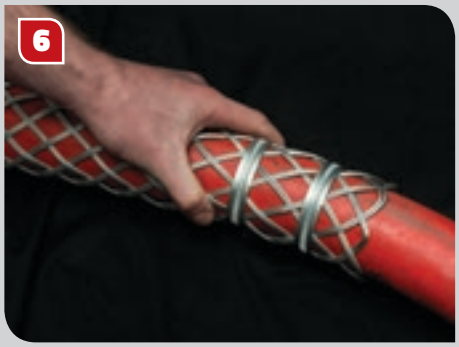

The grip should then be placed over the end of the conductor...

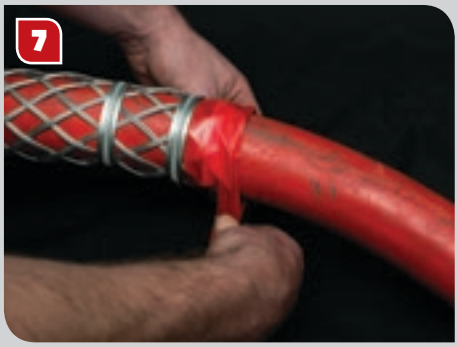

...and pushed over the conductor.

The grip then needs to be pushed along so that all the lattice is in contact with the conductor.

Once the cable grip is in place on the conductor, two clamps should be fitted to the end of the grip (as shown). We recommend between 1 ¼" (30mm) and 2 ¼" (55mm) away from the end of the cable grip.

Tape should then be wound around the end of the cable grip furthest away from the eye ends.

This will prevent the cable grip from snagging when in use.

LACE UP CABLE GRIP INSTRUCTIONS

PLEASE NOTE: The images shown here use double weave cable grips. When lacing single weave cable grips please use single wire lace; use double-laced for double weave cable grips; and use triple-laced for triple weave cable grips.

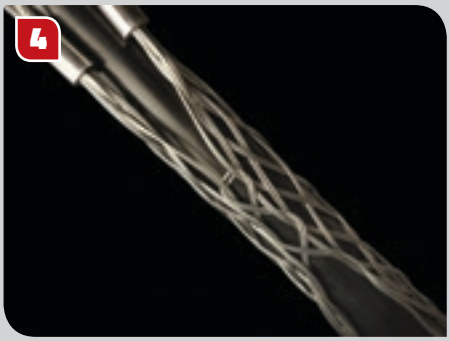

Start the lacing from the 'eye' end or anchoring end of the cable grip.

Thread the lace through the first two loops of the split and pull through until the laces are centered at this point.

Don't pull the lace too tight at this stage. Leave a space between adjoining loops roughly equal to the width of one diamond of the mesh.

Continue down the length of the cable grip. Try to maintain equal tension and equal spacing throughout as this leads to a more stable and equal grip.

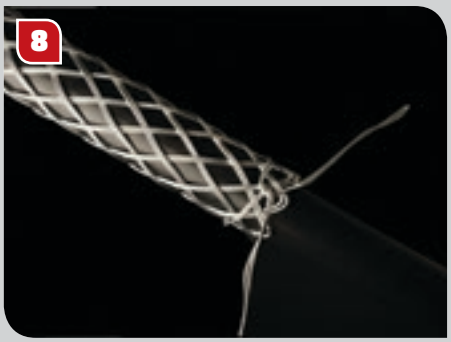

As you continue down the length, pull the open sides of the grip as wide apart as required.

Try to achieve an even and neat lace-up as this assists with the strength of the grip when pulling.

Finally, tie the ends of the lace once or twice round the end of the cable grip twisting the ends together securely. Excess lace can be cut off.

Add any additional support as required – banding is recommended. The Slingco cable grip is now ready to use.
